

Managing Breeding Season & Beyond

OvaMed® (altrenogest) allows you to schedule breeding and manage prolonged estrus conditions. It is clinically proven to effectively suppress estrus in 95% of mares after three days of treatment.

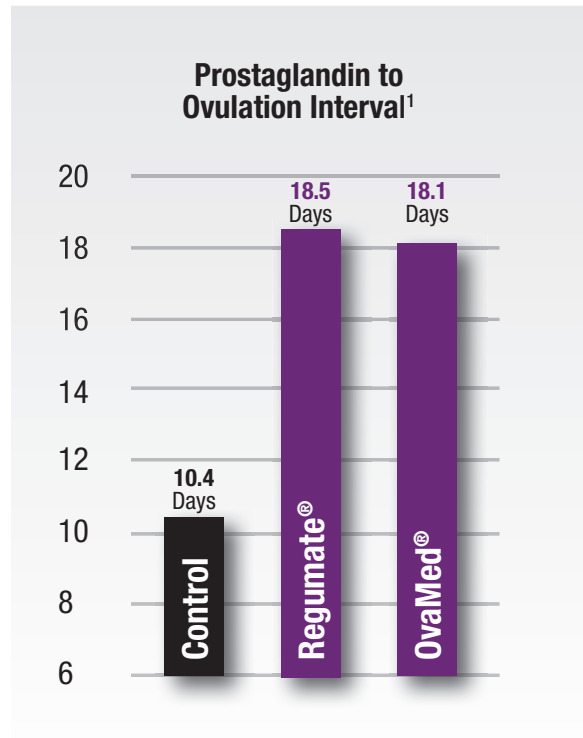

OvaMed® is easy to administer, easy on the budget, and makes it easy to achieve the breeding management performance you need.

Supporting Your Dedication to Healthy Breeding

OvaMed® is a synthetic progesterone and indicated for the suppression of estrus in mares.

- Easy and reliable breeding management. Allows for a predictable occurrence of estrus 4-5 days following drug withdrawal. Especially useful when using frozen or cooled semen.
- Performance mares—suppressing estrus may reduce undesirable changes in temperament such as increased sensitivity and irritability.
- Easy and quick administration thanks to a 1,000 mL bottle and dosing cap.
- Cost-effective alternative to the leading brand.

OvaMed® has the same active ingredients, inactive ingredients, formulation and results as the leading brand, but for the cost of a generic drug.
